

Updated Speed Report for Search Algorithms

This report presents updated performance benchmarks for common search algorithms under two modes:

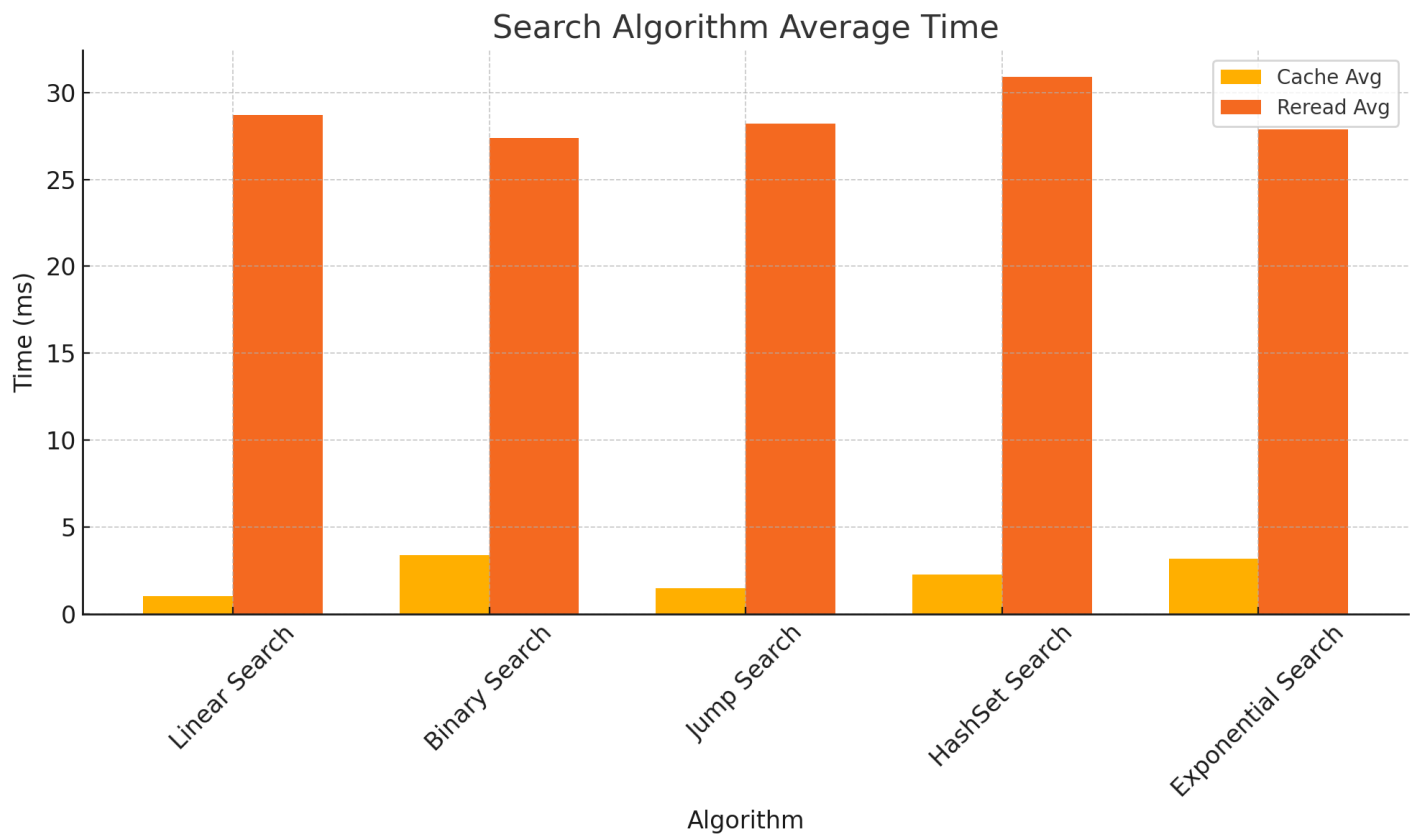

- Cache Mode (REREAD_ON_QUERY = False)
- Reread Mode (REREAD_ON_QUERY = True)

File: 200k.txt (200,000+ lines), Match Type: Exact full-line match

Test Strings: 1,000 random (751 hits, 249 misses)

Performance Metrics:

Algorithm	Cache Avg (ms)	Reread Avg (ms)	Cache Best (ms)	Cache Worst (ms)
Linear Search	1.020	28.7	0.74	14.42
Binary Search	3.390	27.4	2.02	21.48
Jump Search	1.480	28.2	1.25	25.29
HashSet Search	2.270	30.9	1.48	27.24
Exponential Search	3.160	27.9	2.02	25.02

Recommendations:

- Static, high-frequency queries: Use HashSet Search
- Sorted, reread-heavy workloads: Binary or Exponential Search
- Unsorted or dynamic data: Linear or Jump Search
- Memory-constrained environments: Linear or Jump Search
